
TITLE PAGE

- **Project Title:**
 - **Submitted by:** Ravi
 - **Class / Section / Roll No.:**
 - **Institution:**
 - **Subject / Course:**
 - **Submitted to:**
 - **Date:**
 - **Academic Year / Semester:**
-

1. Introduction

- Brief background of the topic/project
 - Why this topic is important or relevant
 - What your project covers (1–3 lines)
-

2. Objective

Write 3–6 bullet points such as:

- To study and summarize key information about **[topic]**
 - To create content using AI tools (text, images, video)
 - To design a poster and a presentation
 - To develop a Python program related to the project
 - To evaluate results and reflect on learning
-

3. Tools Used

Create a table like this:

Category	Tool Name	Purpose
AI Writing	(e.g., ChatGPT)	Content generation, editing
Research	(e.g., Google/Scholar)	Collect references and facts
Image Generation (e.g., DALL·E/Midjourney/Canva AI) AI images for poster		

Category	Tool Name	Purpose
Design	(e.g., Canva/Photoshop)	Poster creation
Presentation	(e.g., PowerPoint/Google Slides)	Slides preparation
Programming	Python (libraries)	Code implementation
Video	(e.g., CapCut/Pictory)	AI video creation

4. Research Findings

Include:

- Key points you discovered (use headings/bullets)
- Important statistics/facts (with sources if required)
- 1 short paragraph summary of what you learned from research

Optional sub-structure:

- **Finding 1:**
 - **Finding 2:**
 - **Finding 3:**
-

5. Content Creation

Describe the content you created:

- Topic and target audience
- What content types you wrote (article, script, captions, summary, etc.)
- Content workflow (research → outline → draft → refine)

Add:

- **Final content summary (5–8 lines)** or paste your final content here.
-

6. AI Generated Images

For each image, include:

- **Image Title / Purpose:**
- **Prompt Used:**
- **Tool Used:**
- **Edits/Enhancements Done:** (cropping, color correction, background removal, etc.)

7. Poster Design

Include:

- Poster size (A4/A3/etc.)
 - Design theme and color palette
 - Layout sections used (title, visuals, points, QR, etc.)
 - Tools used and steps followed
 - Final poster description (what it communicates)
-

8. Presentation

Include:

- Total number of slides
 - Slide-wise summary (1 line each) or key sections:
 - Title
 - Problem/Background
 - Objectives
 - Findings
 - Tools
 - Demo (Python/Video)
 - Results
 - Conclusion
-

9. Python Program

Include:

- **Problem statement:** what the program does
 - **Algorithm/logic (brief):**
 - **Libraries used:**
 - **Code:** (paste in a code block)
 - **Sample input/output or screenshots:**
 - **How to run it:** python filename.py
-

10. AI Video

Include:

- Video duration
 - Tool used
 - Script/storyboard summary
 - How visuals/audio were generated
 - Export settings (resolution, format)
-

11. Results

Write measurable outcomes:

- What you successfully produced (content, images, poster, slides, code, video)
 - Quality evaluation (clarity, design, accuracy)
 - Any feedback received (if applicable)
-

12. Conclusion

- 1 paragraph summarizing what the project achieved
 - Restate objectives and confirm completion
 - Final takeaway (2–3 lines)
-

13. Reflection Report

Write in first person (recommended):

- What you learned (technical + conceptual)
 - What was challenging and how you solved it
 - What you would improve next time
 - Ethical note (e.g., transparency about AI use, avoiding plagiarism)
-

If you tell me your **project topic** (and which AI tools you actually used), I can generate a complete filled-out version of all 13 sections in the same format.
