

Step 6: Coding – Student Management System

You need a **simple Python Student Management System**.

You can use [GitHub Copilot](#), [Cursor](#), or [Replit](#).

Create a simple Python console-based Student Management System.

Features:

1. Add student
2. View students
3. Search student
4. Update student
5. Delete student
6. Calculate student average
7. Exit

Use functions and dictionaries.

Keep the code simple and suitable for a college assignment.
